

Claim

I claim all rights as the inventor of the "Comfort Slide" seat belt accessory. The comfort slide allows the user of a three-point seat belt assembly to position the crossover section away from their neck, by sliding the accessory away from the locking device. Moving the accessory away from the locking device changes the angle and the position when buckling up, allowing them to ride in comfort. The plastic accessory is a one-piece plastic unit. This new style of seat belt accessory is user friendly and will enhance the use of buckling up.
